

## DONALD DERRY LIGHTNING HOLLOWER

*Thank you for your interest in the Lightning Hollower Tool System. I have been refining these Hollowing Tools for several years now and the response by the turning community has been overwhelmingly positive. The feedback received from the turners who have worked with the tools indicates that ease of set up, compact size and rock solid performance are what make the system unique and appealing. This is a complete, turn key system, ready to make a hollow form. You will not need to make or modify anything on your lathe, simply put it to work.*

*The original concept, using a square bar and a torque gate at the tool post is the brain child of my friend Ron Gerton. Ron graciously agreed to allow me to develop his point of view into a system that would work on a mini lathe all the way up to the heavy weights that have become a state of the art in the field. I did this to please my own high artistic standards for quality tooling and also to have a system that would support my desire to easily teach beginners how to join the wonderful world of hollow form turning. The system is so easy to learn that I actually taught an Oregon woman to make a small hollow form in one afternoon. Nothing unusual about this except that she had virtually never used a lathe before.*

*The brass laser head is my own invention and solves many issues dealing with convenience and stability of adjusting the laser. I didn't like the bulk, trial and error methods and the bouncing laser dot that most hollowing systems settle for. I solved these problems by making an adjuster with an X, Y axis. It has micrometer like adjustments that needs no set screws to hold it in place.*

*Just dial it in and cut with confidence. When it is set it stays put and does not dance all over the place. Even the momentary switch of the laser is held on by simply turning the laser a quarter turn in its holder.*

*If you have any questions about the Lightning Hollower set up or how to use it please call me at the number below. Again, thank your interest in Derry Tools*
